Lab 09 — Import and Clean a Finance DataFrame

Python Programming for Finance · TGS-2026065049 · LO5

Scenario

A treasury extract contains duplicated dates, missing prices and inconsistent date/value types.

Goal

A curated price DataFrame and a written data-quality reconciliation.

Tools

Pandas, CSV

Step-by-step

1. Load dirty_prices.csv with Pandas and inspect head, info and dtypes.

2. Parse Date and coerce numeric price columns.

3. Measure duplicates and missing values before changing data.

```
python starter.py
```

4. Remove duplicate dates using the latest record.

5. Fill only short Close-price gaps and document the assumption.

6. Save clean_prices.csv and quality_report.txt.

```
python solution.py
```

Acceptance criteria

The curated file has unique sorted dates, numeric prices, no missing Close values, and a reconciliation from raw to clean rows.

Evidence

Capture the executed output, validation result, generated file or chart, and a one-sentence finance interpretation.
